"Software Developer who enjoys wearing multiple hats, learning new technologies, and building full-stack applications, seeking a Software Developer position to further my knowledge while contributing my passion and skills into building something great."

PROJECTS (more on portfolio)

webpult.com
webpult.com | demo
Built a full-stack web app to allow users to redirect/share urls between devices without direct connectivity using React for the front-end and node.js, express, and socket.io/web sockets for the back-end.

unitSave
unitsave.com | Google Play | demo
Built a mobile app for comparing unit prices of items with different units of measurement using React Native and TypeScript.
